### Mechanic invents 'water fuelled' car that runs for less than 2p a litre

The eco-friendly car uses a mix of water and chemicals that costs just under 2p a litre to produce

5 A car mechanic from India claims to have designed an astonishing car that runs on water. Mohammad Raees Markani, 44, has been modifying an 800 cc engine for the last five years - and now believes he has made the scientific breakthrough.

The eco-friendly car uses a mix of water and carbides. Incredibly, A one litre mix of this concoction costs under two pence - making it more cost effective than traditional fuels. Markani, from the state of Madhya Pradesh, said: "The car runs on acetylene gas , which is formed from a chemical reaction between calcium carbide and water.

### Finally! A Flying Car Could Go On Sale In 2017

5 Last year, Slovakian company AeroMobil unveiled its latest prototype of an elongated, road-ready vehicle with stowable wings that can navigate both city traffic and the airspace in between landings and take-offs from the world's airports. (Forbes contributor Federico Guerrini covered the reveal in Vienna in October; check it out for more details on the latest model known as the Aeromobil 3.0.) Then, this week at South by Southwest in Austin, Texas, Co-Founder and CEO Juraj Vaculik said that the company planned to move flying cars
