pêcher <i>fish</i>	un ouragan <i>a hurricane</i>

### The problem

I'm gonna educate you on what's going on with the Earth because I didn't know anything and I learned a little bit.

We've got a big problem on our hands, guys, ok ?

The problem is driven mostly by our behaviour here on Earth.

We're doing bad s\*\*t : these bad things are causing temperatures to rise, it's called global warming.

Some people think it's not a real thing. Everyone who disputes that is a f\*\*\*ing idiot. Grow up!

(He's showing graphs to prove temperatures are rising steadily over time.)

A chain reaction of dangers occurs that ruins the Earth: the polar ice cap melts, oceans rise, fishing for food becomes complicated, everything gets f\*\*\*ed, super storms start occurring, hurricanes are wiping out cities.

The s\*\*t didn't happen 5 hundred years ago at the rate it does now because everything we're doing on Earth is having a chain reaction.

We can't let the temperature rise 1° celsius more than it is right now.

Once we do that the damage is completely irreversible and we're just like f\*\*\*ed!

We have 12 years, I'm being told, to turn this thing around..

I can't be in that f\*\*\*ing environment, are you kidding me? I don't wanna wear a mask. I'm a model.

The beautiful thing about this whole thing is that we actually can fix it : we can save the Earth.

How cool is that! What an opportunity!

It's like a basket-ball game: we have the ball, if we don't score, we lose (DEATH), if we score we win (SURVIVAL). Watch the next video, you'll learn.

réussir *succeed*

se soucier de *care about*

transformer *turn into*

un graphique *a graph*

un panneau solaire *a solar panel*

une éolienne *a windmill*

**Solution energy**

Welcome to the solution.

The only way we solve this problem is if we change three different things : one, how we create our energy; two, how we can serve and protect nature; three, how we create our food.

Right now we're doing a pretty bad job on all three of those but with a little bit of a tweak, maybe we can succeed.

Energy is like how we power all the machines on Earth and like heat the Earth.

We are burning tons of fossil fuels : coal, oil and gas.

That causes carbon (CO2) to go into the air : as a consequence, temperatures rise.

The graph is about carbon emissions over the last 800 thousand years of life. The industrial age started it a hundred years ago.

Renewable energies are the sun and the wind.

How can I help? I'm not a solar panel, I'm not a wind mill.

You are human, aren't you? You have the right to vote. Vote for someone who cares about the environment.

Together we can turn this planet into a 100% renewable energy planet.

It just takes like caring. Do you care or are you just cool with death?

There's so many things that you can do : there's a petition in there, click and you'll find out.

non contrôlé *unchecked*

se déverser *spew into*

se produire *occur*

un imbécile *an idiot*

un terrain de football *a football field*

une proie *a prey*

protéger *protect*

**Solution Nature**

The way that we're treating nature here on earth is flat-out disgusting.

Every second, a football field worth of rain forest is being cut down, every single second.

Hey, I live in the city, what do I care about the rainforest? You're an idiot.

Rain forest actually has half (1/4!) of the carbon on earth and actually soaks it all in.

If we cut up all these rain forests down, carbon is gonna spew into the atmosphere, the temperatures are gonna rise, then the chain reaction occurs and we all get f\*\*\*ed. So, rethink your position on rainforest, amigo.

Another element is wildlife, animals. Oh my God, how I love animals.

You might think who cares if they all die? We've already got the images and the pictures, and the stuffed animals.

If tigers die then their prey is not kept unchecked, eating all the plants, ... It's all connected, that circle of life s\*\*t that you hear as a child is a real thing.

If we succeed in protecting the animals and protecting nature, we're gonna soak up billions of tons of carbon.

It will keep us below that 1 degree celsius rise from present day that we're all so scared of.

Once that happens, the damage is done. We've gotta keep these f\*\*\*ing trees and these f\*\*\*ing animals alive. I shouldn't curse this much, but I'm so angry, it's all about the carbon.

beaucoup moins <i>way less</i>	pêter <i>fart</i>
bizarre, chelou <i>weird</i>	produits chimiques <i>chemicals</i>
chier, déféquer <i>shit</i>	roter <i>burp</i>
consommation <i>consumption</i>	un papillon <i>a butterfly</i>
consommer <i>consume</i>	un problème <i>an issue</i>
disparaître de nos assiettes <i>off the table</i>	une abeille <i>a bee</i>
faire pousser <i>grow</i>	une chauve-souris <i>a bat</i>
fromage <i>cheese</i>	une espèce <i>a species</i>
gaz à effet de serre <i>greenhouse gases</i>	une vache <i>a cow</i>
la terre, le sol <i>the soil</i>	polluer <i>pollute</i>
la viande rouge <i>red meat</i>	polliniser <i>pollinate</i>
manque, pénurie <i>shortage</i>	prendre en compte <i>take into account</i>

**Solution Food**

Now, let's talk about my favourite theme : food.

The way we are creating and consuming food on Earth is incredibly problematic.

Let's start with agriculture which is how we're growing our food.

Right now we're using these intense machines and these weird chemicals, not really taking the environment into account, it's a very polluting business.

There's tons of carbon going into the air, tons of greenhouse gases, there's pesticides killing the soil.

Other species are affected like butterflies, bats, bees which pollinate a third of what we eat. If those things die, then so much food is off the table.

At some point we're gonna have a shortage here on Earth.

Red meat consumption is one of the biggest environmental issues we have here on our planet.

We eat so godam much of it. We've got all these cows, they're burping and shitting and farting which puts methane into the air, which is 27 times more polluting than even carbon.

Am I gonna stop eating steaks and burgers? Of course not

Am I gonna eat it way less? Yeah

Instead of having it four times a week, have it once a week. Cheese ...
